- 2 Research question**
- 3 Introduction
- 4 Preliminary results
- 5 Work in progress

# Research question

What is the error we make today ...

- in inferring phylogenies
- caused by ignoring that speciation takes time to complete?

# Table of Contents

- 3 Introduction**
- 4 Preliminary results
- 5 Work in progress

# From DNA to phylogeny

Using BEAST2<sup>6</sup> Using constant-rate birth-death model<sup>7</sup>

---

<sup>666</sup>Bouckaert, Remco, et al. 2014. PLoS computational biology 10.4.

<sup>666</sup>Nee, Sean, et al. 1994. Philos Trans R Soc Lond B Biol Sci 344.1309.

# Simulating DNA

From PBD phylogeny<sup>8</sup> to DNA alignment<sup>9</sup>.

---

<sup>666</sup>Etienne, Rampal S., and James Rosindell. 2012. Systematic Biology 61.2.

<sup>666</sup>Schliep, Klaus Peter. 2010. Bioinformatics btq706.

# Measuring error

Using nLTT statistic<sup>10</sup>

---

<sup>666</sup>Janzen, Thijs et al. 2015. Methods in Ecology and Evolution 6.5.

# Table of Contents

- 1 Problem
- 2 Research question
- 3 Introduction
- 4 Preliminary results**
- 5 Work in progress

# Longer duration of speciation

Expectation: a longer duration of speciation give more error, as the BD model assumes this equals zero IS THAT REALLY SO?.

# Longer duration of speciation

figure\_error\_expected\_mean\_dur\_spec\_mean

# Effect of bad estimation

original species tree

(a)

posterior tree

(b)

# Longer DNA alignments

Expectation: a longer DNA alignments give less error, as there is more information available

# Longer duration of speciation

figure\_error\_expected\_mean\_dur\_spec\_mean\_alignment\_length
